

## Capstone Project 1 Ideas

Idea 1 is to perform tennis related analysis, for example some club data, to help club owner on how to attract more members and non-members to join tennis and play tennis at club based on age, gender, seasons, etc.

Idea 2 My son is taking tennis and he is leftie. His coach always told me that the lefties have advantage in playing tennis. Some other parents are also interested to know if this is true. So hopefully can find tennis matches related datasets so I can perform some analysis based on the matches stats and verify certain tennis related hypothesis.

Idea 3 is to analyze the science grants granted through years and perform some stats and probability analysis and hopefully can predict the future funding.
